1982 Journal of Guidance, Control, and Dynamics Index

How to Use the Index

In the Subject Index, pages 600-603, each technical paper is listed under a maximum of three appropriate headings. Note the number in boldface type following each paper title, and use that number to locate the paper in the Chronological Index. The Author Index, pages 603-604, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 604-607, lists all papers by their unique code numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the "CP" or conference volume number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 1982, that paper also will appear in both the Subject and Chronological Indexes. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Bifurcation Analysis of Nonlinear Aircraft Dynamics **G82-089**
Flight Performance and Drift Minimization of Magsat in the Lower Atmosphere **G82-060**

Aeroelasticity

An Analytical Pilot Rating Method for Highly Elastic Aircraft **G82-099**
Robust Kalman Filter Design for Active Flutter Suppression Systems **G82-073**

Avionics Systems

Control Logic for Parameter Insensitivity and Disturbance Attenuation **G82-068**

Flight Displays

Disturbance Estimation for a STOL Transport During Landing **G82-042**

Flight Operations

Analysis of Minimum Noise Landing Approach Trajectory **G82-043**
Airplane Performance Sensitivities to Lateral and Vertical Profiles **G81-105**

Guidance and Control

Factors for Cubics and Quartics **G82-097**
Minimum-Time Three-Dimensional Turn to a Point of Supersonic Aircraft **42-087**
Maximum Likelihood Failure Detection of Aircraft Flight Control Sensors **G82-085**
Minimum Fuel Horizontal Flight Paths in the Terminal Area **G82-084**
Low-Order Approaches to High-Order Systems: Problems and Promises **G82-083**
Validation of Reduced-Order Models for Control Systems Design **G82-076**
Robust Kalman Filter Design for Active Flutter Suppression Systems **G82-073**
Adaptive Filtering for an Aircraft Flying in Turbulent Atmosphere **G82-072**
Minimal Order Time Sharing Filters for INS In-Flight Alignment **G82-070**
Control Logic for Parameter Insensitivity and Disturbance Attenuation **G82-068**
A New Technique for Multirate Digital Control Design and Sample Rate Selection **G82-067**
Stability of Spinning Spacecraft with Partially Liquid-Filled Tanks **G82-062**
Analysis of Minimum Noise Landing Approach Trajectory **G82-043**
Doppler-Aided Low-Accuracy Strapdown Inertial Navigation System **G82-039**
A Nongyroscopic Inertial Measurement Unit **G82-038**
An Adaptive Stick-Gain to Reduce Pilot-Induced Oscillation Tendencies **G82-022**
Optimization of Tactical Aircraft Maneuvers Utilizing High Angles of Attack **G82-021**
Efficient Combinations of Numerical Techniques Applied for Aircraft Turning Performance Optimization **G82-020**
An Adaptive Control Approach to Sensor Failure Detection and Isolation **G82-019**
Marginal Optimization of Observation Schedules **G82-015**
Expanded Third-Order Markov Undulation Model **G81-079**
Optimal Control via Mathematical Programming **G81-071**
Model-Following System with Assignable Error Dynamics and Its Application to Aircraft **G80-092**

Handling Qualities, Stability and Control

An Analytical Pilot Rating Method for Highly Elastic Aircraft **G82-099**
Factors for Cubics and Quartics **G82-097**
Bifurcation Analysis of Nonlinear Aircraft Dynamics **G82-089**
Minimum-Time Three-Dimensional Turn to a Point of Supersonic Aircraft **G82-087**
Low-Order Equivalent Models of Highly Augmented Aircraft Determined from Flight Data **G82-086**
Low-Order Approaches to High-Order Systems: Problems and Promises **G82-083**
A New Technique for Multirate Digital Control Design and Sample Rate Selection **G82-067**
Disturbance Estimation for a STOL Transport During Landing **G82-042**
Roll Response Criteria for Transport Aircraft with Advanced Flight Control Systems **G82-041**
An Adaptive Stick-Gain to Reduce Pilot-Induced Oscillation Tendencies **G82-022**
Analytical Control Law for Desirable Aircraft Lateral Handling Qualities **G82-012**
Model-Following System with Assignable Error Dynamics and Its Application to Aircraft **G80-092**

Helicopters

A New Approach for Active Control of Rotorcraft Vibration **G82-023**

Military Missions

Minimal Order Time Sharing Filters for INS In-Flight Alignment **G82-070**
Doppler-Aided Low-Accuracy Strapdown Inertial Navigation System **G82-039**
Estimating the Probability of Crashing for a Terrain-Following Missile **G82-013**

Navigation, Communication, and Traffic Control

Minimal Order Time Sharing Filters for INS In-Flight Alignment **G82-070**

Helicopters

A New Approach for Active Control of Rotorcraft Vibration **G82-023**

Military Missions

Minimal Order Time Sharing Filters for INS In-Flight Alignment **G82-070**
Doppler-Aided Low-Accuracy Strapdown Inertial Navigation System **G82-039**
Estimating the Probability of Crashing for a Terrain-Following Missile **G82-013**

Navigation, Communication, and Traffic Control

Minimal Order Time Sharing Filters for INS In-Flight Alignment **G82-070**

Doppler-Aided Low-Accuracy Strapdown Inertial Navigation System G82-039
A Nongyroscopic Inertial Measurement Unit G82-038
Real-Time Gravity Gradiometer Utilization to Improve INS Accuracy G82-018
Gravity Model Performance in Inertial Navigation G82-011
Expanded Third-Order Markov Undulation Model G81-079

Noise

Analysis of Minimum Noise Landing Approach Trajectory G82-043

Performance

Minimum-Time Three-Dimensional Turn to a Point of Supersonic Aircraft G82-087
Optimization of Tactical Aircraft Maneuvers Utilizing High Angles of Attack G82-021
Efficient Combinations of Numerical Techniques Applied for Aircraft Turning Performance Optimization G82-020
An Adaptive Control Approach to Sensor Failure Detection and Isolation G82-019
Airplane Performance Sensitivities to Lateral and Vertical Profiles G81-105

Simulation

Model-Following System with Assignable Error Dynamics and Its Application to Aircraft G80-092

Testing, Flight and Ground

CPU Coverage Evaluation Using Automatic Fault Injection G82-098
Another Look at Sine-Dwell Mode Testing G82-064

Vibration

Modal Analysis of Gyroscopic Flexible Spacecraft: A Continuum Approach G82-079
A New Approach for Active Control of Rotorcraft Vibration G82-023

Energy

Solar Power Satellites

Precision Release and Aim of Payloads Launched by Lunar Mass-Driver G82-047

Fluid Dynamics

Viscous Nonboundary-Layer Flows

Flight Instabilities of Spinning Projectiles Having Nonrigid Payloads G82-024

Interdisciplinary Topics

Analytical and Numerical Methods

Factors for Cubics and Quartics G82-097
Bifurcation Analysis of Nonlinear Aircraft Dynamics G82-089
Delta-Rho, A Perturbation Method for General and Astrodynamical Trajectories G82-082
An Analytic Approach to Two-Fixed-Impulse Transfers Between Keplerian Orbits G82-080
Kalman Filtering for Spacecraft Attitude Estimation G82-075
An Algorithm for Identification and Analysis of Large Space Structures G82-074
Third-Order Solution to the Main Problem in Satellite Theory G82-065
Variable Node Drag Parameterization for Re-Entry Trajectory Estimation G82-058
Geosynchronous Satellite Perturbations Due to Earth's Triaxially and Luni-Solar Effects G82-029
Optimization of Tactical Aircraft Maneuvers Utilizing High Angles of Attack G82-021
Marginal Optimization of Observation Schedules G82-015
Solution of Linear Gyroscopic Systems G82-014
Gravity Model Performance in Inertial Navigation G82-011
Computation of Partial Derivatives for Ground Tracking of Space Shuttle Orbits G82-010
Attitude Motion of Asymmetric Dual-Spin Spacecraft G82-006
Optimal Thrust Vector Control for Vertical Launch of Tactical Missiles G82-002
Optimal Control via Mathematical Programming G81-071

Astrodynamics

Ballistic Entry Motion, Including Gravity:Constant Drag Coefficient Case G82-095
A Vectorial Form for the Conic Variational Equations G82-090
Delta-Rho, A Perturbation Method for General and Astrodynamical Trajectories G82-082
Interplanetary Trajectory Optimization with Application to Galileo G82-081
An Analytic Approach to Two-Fixed-Impulse Transfers Between Keplerian Orbits G82-080
Third-Order Solution to the Main Problem in Satellite Theory G82-065
Stability of Spinning Spacecraft with Partially Liquid-Filled Tanks G82-062
Navigation Accuracy Analysis for a Halley Intercept Mission G82-048
Minimum Energy Trap States of Dual-Spin Spacecraft G82-046
A Short Efficient Analytical Satellite Theory G82-030
Geosynchronous Satellite Perturbations Due to Earth's Triaxially and Luni-Solar Effects G82-029
Passive Nutation Damping Using Large Appendages with Application to Galileo G82-027
Space Guidance Evolution--A Personal Narrative (History of Key Technologies) G82-016

Atmospheric and Space Sciences

Earth's Magnetic Field Models for Dumping Momentum Magnetically on GPS Satellites G82-077

Celestial Mechanics

A Vectorial Form for the Conic Variational Equations G82-090
Third-Order Solution to the Main Problem in Satellite Theory G82-065
A Short Efficient Analytical Satellite Theory G82-030

Computer Communications, Information Processing and Software

Maximum Likelihood Failure Detection of Aircraft Flight Control Sensors G82-085

Computer Software

An Adaptive Control Approach to Sensor Failure Detection and Isolation G82-019

Computer Technology

CPU Coverage Evaluation Using Automatic Fault Injection G82-098

Numerical Analysis

Efficient Combinations of Numerical Techniques Applied for Aircraft Turning Performance Optimization G82-020
Solution of Linear Gyroscopic Systems G82-014

Reliability, Maintainability, and Logistics Support

CPU Coverage Evaluation Using Automatic Fault Injection G82-098

Research Facilities and Instrumentation

Optical Measurements and Attitude Motion of HERMES After Loss of Stabilization G82-091
Hardware Demonstration of Flexible Beam Control G82-008

Sensor Systems

Expanded Third-Order Markov Undulation Model G81-079

State Estimation

Kalman Filtering for Spacecraft Attitude Estimation G82-075
Navigation Accuracy Analysis for a Halley Intercept Mission G82-048
Application of the Statistically Linearized Filter to Re-entry Estimation G82-017
Hardware Demonstration of Flexible Beam Control G82-008
Estimation of Distributed Parameter Systems G82-003

System Identification

Low-Order Equivalent Models of Highly Augmented Aircraft Determined from Flight Data G82-086
An Algorithm for Identification and Analysis of Large Space Structures G82-074
Another Look at Sine-Dwell Mode Testing G82-064
Variable Node Drag Parameterization for Re-Entry Trajectory Estimation G82-058
Control of Self-Adjoint Distributed-Parameter Systems G82-009

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Ballistic Re-entry Vehicle Flight Dynamics (History of Key Technologies) G82-001

Configurational Design

Flight Control Frequency Response Testing of the Shuttle Ascent Vehicle G82-040

Dynamics and Control

Fixed Trim Re-Entry Guidance Analysis G82-096
Aerodynamic Jump Prediction for Supersonic, High Fineness Ratio, Cruciform Finned Bodies G82-088
Validation of Reduced-Order Models for Control Systems Design G82-076
Reduced-Order Optimal Feedback Control Law Synthesis for Flutter Suppression G82-069

Deadband Control System Limit Cycles Analyzed by Fourier Series G82-051
Flight Instabilities of Spinning Projectiles Having Nonrigid Payloads G82-024
Optimal Thrust Vector Control for Vertical Launch of Tactical Missiles G82-002
Ballistic Re-entry Vehicle Flight Dynamics (History of Key Technologies) G82-001

Guidance

Fixed Trim Re-Entry Guidance Analysis G82-096
A Nongyroscopic Inertial Measurement Unit G82-038
Optimal Control and Estimation for Strapdown Seeker Guidance of Tactical Missiles G82-037
Real-Time Gravity Gradiometer Utilization to Improve INS Accuracy G82-018
Space Guidance Evolution--A Personal Narrative (History of Key Technologies) G82-016

Launch Vehicle Systems

Aerodynamic Jump Prediction for Supersonic, High Fineness Ratio, Cruciform Finned Bodies G82-088
Precision Release and Aim of Payloads Launched by Lunar Mass-Driver G82-047

Missile Systems

Fixed Trim Re-Entry Guidance Analysis G82-096
Optimal Control and Estimation for Strapdown Seeker Guidance of Tactical Missiles G82-037
Estimating the Probability of Crashing for a Terrain-Following Missile G82-013
Optimal Thrust Vector Control for Vertical Launch of Tactical Missiles G82-002

Mission Studies and Economics

Estimating the Probability of Crashing for a Terrain-Following Missile G82-013

Simulation

Optimal Control and Estimation for Strapdown Seeker Guidance of Tactical Missiles G82-037

Subsystem Design and Ground Support

Flight Control Frequency Response Testing of the Shuttle Ascent Vehicle G82-040

Testing, Flight and Ground

Aerodynamic Jump Prediction for Supersonic, High Fineness Ratio, Cruciform Finned Bodies G82-088
Flight Instabilities of Spinning Projectiles Having Nonrigid Payloads G82-024

Trajectories and Tracking Systems

Application of the Statistically Linearized Filter to Re-entry Estimation G82-017

Vibration

Flight Control Frequency Response Testing of the Shuttle Ascent Vehicle G82-040

Propulsion

Electric and Advanced Space Propulsion

Electrostatic Velocity Adjustment of Payloads Launched by Lunar Mass-Driver G82-031

Spacecraft Technology

Attitude Determination

Optical Measurements and Attitude Motion of HERMES After Loss of Stabilization G82-091
Kalman Filtering for Spacecraft Attitude Estimation G82-075
In-Flight Estimation of Spacecraft Attitude Sensor Accuracies and Alignments G82-061
Celestial Referenced Attitude Determination of Galileo Spacecraft G82-049
Pointing Fluctuation of a Despun Antenna Due to Axial Thruster Firing G82-007
Automated Test Set to Measure Star Scanner Accuracy with Arc-Second Resolution G82-004

Configurational and Structural Design (including Loads)

Stability Relationships Between Gyrostats with Free, Constant-Speed, and Speed-Controlled Rotors G82-094
Minimum Energy Trap States of Dual-Spin Spacecraft G82-046

Data Sensing, Presentation, and Transmission

The Massively Parallel Processor G82-050

Dynamics and Control

Frequency-Domain Analysis of Flexible Spacecraft Dynamics G82-102
Attitude Control of a Satellite with a Rotating Solar Array G82-101
Computation of a Degree of Controllability via System Discretization G82-100
Stability Relationships Between Gyrostats with Free, Constant-Speed, and Speed-Controlled Rotors G82-094
Single-Axis Spacecraft Attitude Maneuvers Using an Optimal Reaction Wheel Power Criterion G82-093
Discrete-Time Stability of Continuous-Time Controller Designs for Large Space Structures G82-092
Modal Analysis of Gyroscopic Flexible Spacecraft: A Continuum Approach G82-079
Attitude Dynamics of a Satellite During Deployment of Large Plate-Type Structures G82-078
Earth's Magnetic Field Models for Dumping Momentum Magnetically on GPS Satellites G82-077
Validation of Reduced-Order Models for Control Systems Design G82-076
An Algorithm for Identification and Analysis of Large Space Structures G82-074
Space Telescope Pointing Control System G82-071
Order Reduction for Models of Space Structures Using Modal Cost Analysis G82-063
Flight Performance and Drift Minimization of Magsat in the Lower Atmosphere G82-060
Deadband Control System Limit Cycles Analyzed by Fourier Series G82-051
Celestial Referenced Attitude Determination of Galileo Spacecraft G82-049
Precision Release and Aim of Payloads Launched by Lunar Mass-Driver G82-047
Minimum Energy Trap States of Dual-Spin Spacecraft G82-046
Deployment and Retrieval of Shuttle Supported Tethered Satellites G82-045
Electrostatic Velocity Adjustment of Payloads Launched by Lunar Mass-Driver G82-031
Spin-Down and Active Nutation Controller for the Galileo Project G82-028
Passive Nutation Damping Using Large Appendages with Application to Galileo G82-027
Constrained and Unconstrained Modes: Some Modeling Aspects of Flexible Spacecraft G82-026
Parameter-Plane Analysis for Large-Scale Systems G82-025
Marginal Optimization of Observation Schedules G82-015
Solution of Linear Gyroscopic Systems G82-014
Computation of Partial Derivatives for Ground Tracking of Space Shuttle Orbits G82-010
Control of Self-Adjoint Distributed-Parameter Systems G82-009
Hardware Demonstration of Flexible Beam Control G82-008
Pointing Fluctuation of a Despun Antenna Due to Axial Thruster Firing G82-007
Attitude Motion of Asymmetric Dual-Spin Spacecraft G82-006
ASPS Performance with Large Payloads Onboard the Shuttle Orbiter G82-005
Estimation of Distributed Parameter Systems G82-003
Optimal Feedback Slewing of Flexible Spacecraft G81-076

Earth-Orbital Trajectories

Delta-Rho, A Perturbation Method for General and Astrodynamical Trajectories G82-082
Low-Thrust Orbit Raising for Shuttle Payloads G82-066
A Short Efficient Analytical Satellite Theory G82-030
Geosynchronous Satellite Perturbations Due to Earth's Triaxially and Luni-Solar Effects G82-029

Electric Power

Effective Electromagnetic Shielding in Multilayer Printed Circuit Boards G82-102

Entry Vehicle Aerodynamics

Application of a Tip-Fin Controller to the Shuttle Orbiter for Improved Yaw Control G82-059
Variable Node Drag Parameterization for Re-Entry Trajectory Estimation G82-058

Entry Vehicle Configuration Design

Application of a Tip-Fin Controller to the Shuttle Orbiter for Improved Yaw Control G82-059

Entry Vehicle Dynamics and Control

Ballistic Entry Motion, Including Gravity:Constant Drag Coefficient Case G82-095
Application of a Tip-Fin Controller to the Shuttle Orbiter for Improved Yaw Control G82-059
Application of the Statistically Linearized Filter to Re-entry Estimation G82-017

Entry Vehicle Mission Studies and Flight Mechanics

Ballistic Entry Motion, Including Gravity:Constant Drag Coefficient Case G82-095

Lunar and Interplanetary Trajectories

Interplanetary Trajectory Optimization with Application to Galileo G82-081
Optimal Control via Mathematical Programming G81-071
Time-Optimal Orbit Transfer Trajectory for Solar Sail Spacecraft G80-097

Mission Analysis

Interplanetary Trajectory Optimization with Application to Galileo G82-081
An Analytic Approach to Two-Fixed-Impulse Transfers Between Keplerian Orbits G82-080

Navigation, Guidance, and Flight-Path Control

Low-Thrust Orbit Raising for Shuttle Payloads G82-066
In-Flight Estimation of Spacecraft Attitude Sensor Accuracies and Alignments G82-061
The Massively Parallel Processor G82-050
Celestial Referenced Attitude Determination of Galileo Spacecraft G82-049
Navigation Accuracy Analysis for a Halley Intercept Mission G82-048
Maneuver Reconstruction Techniques for Open-Loop Spin-Stabilized Spacecraft G82-044
An Interplanetary Targeting and Orbit Insertion Maneuver Design Technique G82-032
Space Guidance Evolution--A Personal Narrative (History of Key Technologies) G82-016
Computation of Partial Derivatives for Ground Tracking of Space Shuttle Orbits G82-010
Optimal Control via Mathematical Programming G81-071
Geometric Dilution of Precision in Global Positioning System Navigation G81-016
Time-Optimal Orbit Transfer Trajectory for Solar Sail Spacecraft G80-097

Propulsion Systems Integration

Low-Thrust Orbit Raising for Shuttle Payloads G82-066

Signatures and Tracking

Optical Measurements and Attitude Motion of HERMES After Loss of Stabilization G82-091

Simulation

Earth's Magnetic Field Models for Dumping Momentum Magnetically on GPS Satellites G82-077
Flight Performance and Drift Minimization of Magsat in the Lower Atmosphere G82-060
ASPS Performance with Large Payloads Onboard the Shuttle Orbiter G82-005

Systems

Discrete-Time Stability of Continuous-Time Controller Designs for Large Space Structures G82-092
Space Telescope Pointing Control System G82-071
Parameter-Plane Analysis for Large-Scale Systems G82-025
ASPS Performance with Large Payloads Onboard the Shuttle Orbiter G82-005

Testing, Flight and Ground

Another Look at Sine-Dwell Mode Testing G82-064

Structural Mechanics and Materials

Aeroelasticity and Hydroelasticity

Reduced-Order Optimal Feedback Control Law Synthesis for Flutter Suppression G82-069

Structural Dynamics

Attitude Control of a Satellite with a Rotating Solar Array G82-101
Modal Analysis of Gyroscopic Flexible Spacecraft: A Continuum Approach G82-079
Attitude Dynamics of a Satellite During Deployment of Large Plate-Type Structures G82-078
Reduced-Order Optimal Feedback Control Law Synthesis for Flutter Suppression G82-069
Constrained and Unconstrained Modes: Some Modeling Aspects of Flexible Spacecraft G82-026
Control of Self-Adjoint Distributed-Parameter Systems G82-009
Estimation of Distributed Parameter Systems G82-003

Structural Stability

Discrete-Time Stability of Continuous-Time Controller Designs for Large Space Structures G82-092

Chronological Index

G80-092 Model-Following System with Assignable Error Dynamics and Its Application to Aircraft. Nagakatsu Kawahata, *National Aerospace Laboratory* (JGC **3**, 6, p. 508) Article
Technical Comment by J. R. Broussard, *Information & Control Systems, Inc.*; and L. E. Mabius, *The Analytic Sciences Corporation* (JGC **5**, 2, p. 218)
Reply (JGC **5**, 2, p. 219)

G80-097 Time-Optimal Orbit Transfer Trajectory for Solar Sail Spacecraft. T. S. Jayaraman, *Indian Space Research Organisation* (JGC **3**, 6, p. 536) Article
Technical Comment by Lincoln J. Wood, *Jet Propulsion Laboratory, California Institute of Technology*; Thomas P. Bauer and Keith P. Zondervan, *California Institute of Technology* (JGC **5**, 2, p. 221)

G81-016 Geometric Dilution of Precision in Global Positioning System Navigation. Bertrand T. Fang, *Computer Sciences Corporation* (JGC **4**, 1, p. 92) Engineering Note
Technical Comment by P. S. Kamat, *California State University* (JGC **5**, 3, p. 320)
Reply (JGC **5**, 3, p. 320)

G81-071 Optimal Control via Mathematical Programming. B. B. Sheela, *ISRO Satellite Centre (India)*; and P. Ramamoorthy, *National Aeronautical Laboratory (India)* (JGC **4**, 4, p. 443) Engineering Note
Technical Comment by Lincoln J. Wood, *California Institute of Technology* (JGC **5**, 3, p. 318)
Reply (JGC **5**, 3, p. 319)

G81-076 Optimal Feedback Slewing of Flexible Spacecraft. John A. Breakwell, *Lockheed Missiles & Space Company, Inc.* (JGC **4**, 5, p. 472) Article
Technical Comment by J. L. Junkins, *Virginia Polytechnic Institute and State University* (JGC **5**, 3, p. 318)

G81-079 Expanded Third-Order Markov Undulation Model. Mark A. Gerber, *The Charles Stark Draper Laboratory, Inc.* (JGC **4**, 5, p. 495) Article
Technical Comment by George F. Koehler, *Dynamics Research Corporation* (JGC **5**, 6, p. 599)
Technical Comment by Stephen L. Baumgartner and Warren G. Heller, *The Analytic Sciences Corporation* (JGC **5**, 6, p. 599)
Reply (JGC **5**, 6, p. 601)

G81-105 Airplane Performance Sensitivities to Lateral and Vertical Profiles. John C. Wauer and Juergen M. H. Bruckner, *Rockwell International*; and Curt H. Humphrey, *United Airlines* (JGC **4**, 6, p. 606) Article
Errata (JGC **5**, 2, p. 224)

G82-001 Ballistic Re-entry Vehicle Flight Dynamics (History of Key Technologies). D. H. Platus, *The Aerospace Corporation* (JGC **5**, 1, p. 4) Article

G82-002 Optimal Thrust Vector Control for Vertical Launch of Tactical Missiles. H-O. Jonsson and G. Malmberg, *SAAB-SCANIA AB (Sweden)* (JGC **5**, 1, p. 17) Article

G82-003 Estimation of Distributed Parameter Systems. David B. Schaechter. *Jet Propulsion Laboratory, California Institute of Technology* (JGC **5**, 1, p. 22) Article

G82-004 Automated Test Set to Measure Star Scanner Accuracy with Arc-Second Resolution. M. W. Hubbard and R. A. Landis, *Ball Aerospace Systems Division* (JGC **5**, 1, p. 27) Article based on AIAA Paper 80-1766 CP805

G82-005 ASPS Performance with Large Payloads Onboard the Shuttle Orbiter. Claude R. Keckler, *NASA Langley Research Center* (JGC **5**, 1, p. 32) Article based on AIAA Paper 80-1779 CP805

G82-006 Attitude Motion of Asymmetric Dual-Spin Spacecraft. John E. Cochran, Ping-Huei Shu and Stephen D. Rew, *Auburn University* (JGC **5**, 1, p. 37) Article based on AIAA Paper 80-1645

G82-007 Pointing Fluctuation of a Despun Antenna Due to Axial Thruster Firing. Tadashi Shiomi, *Radio Research Laboratories (Japan)* (JGC **5**, 1, p. 43) Article

G82-008 Hardware Demonstration of Flexible Beam Control. David B. Schaechter, *Jet Propulsion Laboratory, California Institute of Technology* (JGC **5**, 1, p. 48) Article based on AIAA Paper 80-1794 CP805

G82-009 Control of Self-Adjoint Distributed-Parameter Systems. L. Meirovitch and H. Baruh, *Virginia Polytechnic Institute and State University* (JGC **5**, 1, p. 60) Article based on AIAA Paper 80-1707 CP805

G82-010 Computation of Partial Derivatives for Ground Tracking of Space Shuttle Orbits. W. H. Goodyear, *IBM Federal Systems Division* (JGC 5, 1, p. 67) Article based on AIAA Paper 78-1404

G82-011 Gravity Model Performance in Inertial Navigation. R. M. Edwards, *Air Force Wright Aeronautical Laboratories* (JGC 5, 1, p. 73) Article based on AIAA Paper 80-1726 CP805

G82-012 Analytical Control Law for Desirable Aircraft Lateral Handling Qualities. H. Ohta, *Nagoya University*; P. N. Nikiforuk and M. M. Gupta, *University of Saskatchewan (Canada)* (JGC 5, 1, p. 79) Article

G82-013 Estimating the Probability of Crashing for a Terrain-Following Missile. Edward P. Cunningham, *Applied Physics Laboratory, Johns Hopkins University* (JGC 5, 1, p. 86) Article

G82-014 Solution of Linear Gyroscopic Systems. F. Janssens, *ESTEC (The Netherlands)* (JGC 5, 1, p. 92) Engineering Note

G82-015 Marginal Optimization of Observation Schedules. Angus Andrews, *Rockwell International Science Center* (JGC 5, 1, p. 95) Engineering Note based on AIAA Paper 80-1787 CP805

G82-016 Space Guidance Evolution--A Personal Narrative (History of Key Technologies). Richard H. Battin, *Charles Stark Draper Laboratory, Inc.* (JGC 5, 2, p. 97) Article
Errata (JGC 5, 3, p. 320)

G82-017 Application of the Statistically Linearized Filter to Re-entry Estimation. Peter R. Hempel and James P. Cartland, *Lockheed Missiles and Space Company, Inc.* (JGC 5, 2, p. 111) Synoptic based on AIAA Paper 80-1663

G82-018 Real-Time Gravity Gradiometer Utilization to Improve INS Accuracy. E. M. Wells and J. V. Breakwell, *Stanford University* (JGC 5, 2, p. 113) Article based on AIAA Paper 80-1722 CP805

G82-019 An Adaptive Control Approach to Sensor Failure Detection and Isolation. Mohammad Nabih Wagdi, *University of Riyadh (Saudi Arabia)* (JGC 5, 2, p. 118) Article

G82-020 Efficient Combinations of Numerical Techniques Applied for Aircraft Turning Performance Optimization. D. Blank and J. Shinar, *Technion-Israel Institute of Technology* (JGC 5, 2, p. 124) Article

G82-021 Optimization of Tactical Aircraft Maneuvers Utilizing High Angles of Attack. K. H. Well, *DFVLR*; B. Faber, *Messerschmitt-Bolkow-Blohm (MBB)*; and E. Berger, *DFVLR* (JGC 5, 2, p. 131) Article based on AIAA Paper 80-1596 CP806

G82-022 An Adaptive Stick-Gain to Reduce Pilot-Induced Oscillation Tendencies. Bruce G. Powers, *NASA Dryden Flight Research Center* (JGC 5, 2, p. 138) Article

G82-023 A New Approach for Active Control of Rotorcraft Vibration. N. K. Gupta, *Integrated Systems, Inc.*; and R. W. Du Val, *NASA Ames Research Center* (JGC 5, 2, p. 143) Article based on AIAA Paper 80-1778 CP805

G82-024 Flight Instabilities of Spinning Projectiles Having Nonrigid Payloads. Miles C. Miller, *Chemical Systems Laboratory--ARRADCOM* (JGC 5, 2, p. 151) Article based on AIAA Paper 81-0223

G82-025 Parameter-Plane Analysis for Large-Scale Systems. Sherman M. Seltzer, *Control Dynamics Company*; Bernard A. Asner Jr., *The University of Dallas*; and Robert L. Jackson, *TRW Defense and Space Systems Group* (JGC 5, 2, p. 158) Article based on AIAA Paper 80-1790 CP805

G82-026 Constrained and Unconstrained Modes: Some Modeling Aspects of Flexible Spacecraft. Hari B. Hablani, *Purdue University* (JGC 5, 2, p. 164) Article

G82-027 Passive Nutation Damping Using Large Appendages with Application to Galileo. Douglas E. Bernard, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 2, p. 174) Article based on AIAA Paper 80-1783 CP805

G82-028 Spin-Down and Active Nutation Controller for the Galileo Project. H. S. Lin, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 2, p. 181) Article based on AIAA Paper 80-1734 CP805

G82-029 Geosynchronous Satellite Perturbations Due to Earth's Triaxially and Luni-Solar Effects. Ahmed Aly Kamel, *Ford Aerospace and Communication Corporation* (JGC 5, 2, p. 189) Article based on AIAA Paper 78-1441

G82-030 A Short Efficient Analytical Satellite Theory. F. R. Hoots, *Aerospace Defense Command* (JGC 5, 2, p. 194) Article based on AIAA Paper 80-1659

G82-031 Electrostatic Velocity Adjustment of Payloads Launched by Lunar Mass-Driver. T. A. Heppenheimer, *Center for Space Science*; David J. Ross, *Phoenix Engineering, Inc.*; and Eric C. Hannah, *Hewlett-Packard Research Laboratories* (JGC 5, 2, p. 200) Article

G82-032 An Interplanetary Targeting and Orbit Insertion Maneuver Design Technique. Gerald R. Hintz, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 2, p. 210) Article based on AIAA Paper 80-1696

G82-037 Optimal Control and Estimation for Strapdown Seeker Guidance of Tactical Missiles. Paul L. Vergez, *U. S. Air Force Armament Laboratory, Eglin Air Force Base* (JGC 5, 3, p. 225) Synoptic

G82-038 A Nongyroscopic Inertial Measurement Unit. Shmuel J. Merhav, *Technion---Israel Institute of Technology* (JGC 5, 3, p. 227) Article

G82-039 Doppler-Aided Low-Accuracy Strapdown Inertial Navigation System. Itzhack Y. Bar-Itzhack, Daniel Serfaty and Yehoshua Vitek, *Technion---Israel Institute of Technology* (JGC 5, 3, p. 236) Article

G82-040 Flight Control Frequency Response Testing of the Shuttle Ascent Vehicle. D. L. Jensen, *Rockwell International* (JGC 5, 3, p. 243) Article based on AIAA Paper 80-1751 CP805

G82-041 Roll Response Criteria for Transport Aircraft with Advanced Flight Control Systems. M. F. C. van Gool, *National Aerospace Laboratory NLR (The Netherlands)* (JGC 5, 3, p. 251) Article based on AIAA Paper 80-1572 CP806

G82-042 Disturbance Estimation for a STOL Transport During Landing. J. A. Bossi, *University of Washington*; and A. E. Bryson Jr., *Stanford University* (JGC 5, 3, p. 258) Article based on AIAA Paper 81-0018

G82-043 Analysis of Minimum Noise Landing Approach Trajectory. H. Ohta, *Nagoya University (Japan)* (JGC 5, 3, p. 263) Article based on AIAA Paper 80-1598 CP806

G82-044 Maneuver Reconstruction Techniques for Open-Loop Spin-Stabilized Spacecraft. Raymond B. Frauenholz (JGC 5, 3, p. 270) Article based on AIAA Paper 80-1699

G82-045 Deployment and Retrieval of Shuttle Supported Tethered Satellites. A. K. Misra, *McGill University (Canada)*; and V. J. Modi, *The University of British Columbia (Canada)* (JGC 5, 2, p. 3) Article based on AIAA Paper 80-1693

G82-046 Minimum Energy Trap States of Dual-Spin Spacecraft. Michael G. Hollars, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 3, p. 286) Article based on AIAA Paper 80-1780 CP805

G82-047 Precision Release and Aim of Payloads Launched by Lunar Mass-Driver. T. A. Heppenheimer, *Center for Space Science*; David J. Ross, *Phoenix Engineering, Inc.*; and Eric C. Hannah, *Hewlett-Packard Research Laboratories* (JGC 5, 3, p. 291) Article

G82-048 Navigation Accuracy Analysis for a Halley Intercept Mission. Lincoln J. Wood, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 3, p. 300) Article based on AIAA Paper 81-0312

G82-049 Celestial Referenced Attitude Determination of Galileo Spacecraft. Edward C. Wong and John Y. Lai, *Jet Propulsion Laboratory, California Institute of Technology* (JGC 5, 3, p. 307) Article based on AIAA Paper 80-1732 CP805

G82-050 The Massively Parallel Processor. D. H. Schaefer, J. R. Fischer and K. R. Wallgren, *NASA Goddard Space Flight Center* (JGC 5, 3, p. 313) Engineering Note

G82-051 Deadband Control System Limit Cycles Analyzed by Fourier Series. Franklin Loesch, *The Aerospace Corporation* (JGC 5, 3, p. 315) Engineering Note

G82-058 Variable Node Drag Parameterization for Re-Entry Trajectory Estimation. Ronald W. Greene and Walton E. Williamson Jr., *Sandia National Laboratories* (JGC 5, 4, p. 321) Article based on AIAA Paper 81-0168

G82-059 Application of a Tip-Fin Controller to the Shuttle Orbiter for Improved Yaw Control. Richard W. Powell and Delma C. Freeman Jr., *NASA Langley Research Center* (JGC 5, 4, p. 325) Article based on AIAA Paper 81-0074

G82-060 Flight Performance and Drift Minimization of Magsat in the Lower Atmosphere. Ramasamy G. Sellappan, *RCA American Communications, Inc.*; and Ashok K. Saxena, *Fairchild Space and Electronics Company* (JGC 5, 4, p. 330) Article

G82-061 In-Flight Estimation of Spacecraft Attitude Sensor Accuracies and Alignments. M. D. Shuster, *Business and Technological Systems, Inc.*; D. M. Chitre, *Comsat Laboratories*; and D. P. Niebur, *Lockheed Missiles & Space Company, Inc.* (JGC 5, 4, p. 339) Article

G82-062 Stability of Spinning Spacecraft with Partially Liquid-Filled Tanks. Brij N. Agrawal, *International Telecommunications Satellite Organization* (JGC 5, 4, p. 344) Article based on AIAA Paper 81-0172

G82-063 Order Reduction for Models of Space Structures Using Modal Cost Analysis. Robert E. Skelton, Peter C. Hughes and Hari B. Hablani, *Purdue University* (JGC 5, 4, p. 351) Article

G82-064 Another Look at Sine-Dwell Mode Testing. J. E. Anderson, *The Aerospace Corporation* (JGC 5, 4, p. 358) Article based on AIAA Paper 81-0532 CP811

G82-065 Third-Order Solution to the Main Problem in Satellite Theory. Shannon Coffey, *Naval Research Laboratory*; and Andre Deprit, *National Bureau of Standards* (JGC 5, 4, p. 366) Article based on AIAA Paper 80-1657

G82-066 Low-Thrust Orbit Raising for Shuttle Payloads. T. M. Spencer, R. Glickman and W. Bercaw, *Ball Aerospace Systems Division* (JGC 5, 4, p. 372) Article

G82-067 A New Technique for Multirate Digital Control Design and Sample Rate Selection. Douglas P. Glasson, *The Analytic Sciences Corporation* (JGC 5, 4, p. 379) Article based on AIAA Paper 81-0022

G82-068 Control Logic for Parameter Insensitivity and Disturbance Attenuation. Arie Ashkenazi, *Ministry of Defense (Israel)*; and Arthur E. Bryson Jr., *Stanford University* (JGC 5, 4, p. 383) Article based on AIAA Paper 80-1708 CP805

G82-069 Reduced-Order Optimal Feedback Control Law Synthesis for Flutter Suppression. V. Mukhopadhyay, J. R. Newsom and I. Abel, *NASA Langley Research Center* (JGC 5, 4, p. 389) Article based on AIAA Paper 80-1613 CP806

G82-070 Minimal Order Time Sharing Filters for INS In-Flight Alignment. Itzhack Y. Bar-Itzhack, *Technion-Israel Institute of Technology* (JGC 5, 4, p. 396) Article

G82-071 Space Telescope Pointing Control System. H. Dougherty, *Lockheed Missiles & Space Company, Inc.*; K. Tompetrini and J. Levinthal, *Bendix Guidance Systems Division*; and G. Nurre, *NASA Marshall Space Flight Center* (JGC 5, 4, p. 403) Article based on AIAA Paper 80-1784 CP805

G82-072 Adaptive Filtering for an Aircraft Flying in Turbulent Atmosphere. Hiroshi Okubo, *University of Osaka Prefecture* (JGC 5, 4, p. 410) Engineering Note

G82-073 Robust Kalman Filter Design for Active Flutter Suppression Systems. W. L. Garrard, *University of Minnesota*; J. K. Mahesh and C. R. Stone, *Honeywell Systems and Research Center*; and H. J. Dunn, *NASA Langley Research Center* (JGC 5, 4, p. 412) Engineering Note

G82-074 An Algorithm for Identification and Analysis of Large Space Structures. E. D. Denman and J. Leyva-Ramos, *University of Houston* (JGC 5, 4, p. 414) Engineering Note based on AIAA Paper 81-1842 CP816

G82-075 Kalman Filtering for Spacecraft Attitude Estimation. E. J. Lefferts, *NASA Goddard Space Flight Center*; F. L. Markley, *Naval Research Laboratory*; and M. D. Shuster, *Business and Technological Systems, Inc.* (JGC 5, 5, p. 417) Survey Paper based on AIAA Paper 82-0070

G82-076 Validation of Reduced-Order Models for Control Systems Design. M. E. Sezer, *University of Petroleum & Minerals (Saudi Arabia)*; and D. D. Siljak, *University of Santa Clara* (JGC 5, 5, p. 430) Article

G82-077 Earth's Magnetic Field Models for Dumping Momentum Magnetically on GPS Satellites. Thomas J. Eller, *International Training and Education Company*; and David A. Wagie, *U. S. Air Force Academy* (JGC 5, 5, p. 438) Article based on AIAA Paper 80-1644

G82-078 Attitude Dynamics of a Satellite During Deployment of Large Plate-Type Structures. A. E. Ibrahim and A. K. Misra, *McGill University (Canada)* (JGC 5, 5, p. 442) Article based on AIAA Paper 81-0502 CP811

G82-079 Modal Analysis of Gyroscopic Flexible Spacecraft: A Continuum Approach. Hari B. Hablani, *NASA Johnson Space Center* (JGC **5**, 5, p. 448) Article based on AIAA Paper 81-0504 CP811

G82-080 An Analytic Approach to Two-Fixed-Impulse Transfers Between Keplerian Orbits. Donald J. Jezewski, *NASA Lyndon B. Johnson Space Center*; and Don Mittleman, *Oberlin College* (JGC **5**, 5, p. 458) Article

G82-081 Interplanetary Trajectory Optimization with Application to Galileo. Louis A. D'Amario, Dennis V. Byrnes and Richard H. Stanford, *Jet Propulsion Laboratory, California Institute of Technology* (JGC **5**, 5, p. 465) Article

G82-082 Delta-Rho, A Perturbation Method for General and Astrodynamical Trajectories. Alan M. Schneider and Jane Anne Leyland, *University of California at San Diego* (JGC **5**, 5, p. 472) Article

G82-083 Low-Order Approaches to High-Order Systems: Problems and Promises. David G. Mitchell and Roger H. Hoh, *Systems Technology, Inc.* (JGC **5**, 5, p. 482) Article

G82-084 Minimum Fuel Horizontal Flight Paths in the Terminal Area. Eliezer Kreindler and Frank Neuman, *NASA Ames Research Center* (JGC **5**, 5, p. 490) Article

G82-085 Maximum Likelihood Failure Detection of Aircraft Flight Control Sensors. Bernard Friedland, *The Singer Company* (JGC **5**, 5, p. 498) Article

G82-086 Low-Order Equivalent Models of Highly Augmented Aircraft Determined from Flight Data. Mary Shafer, *NASA Ames Research Center* (JGC **5**, 5, p. 504) Article based on AIAA Paper 80-1627 CP806

G82-087 Minimum-Time Three-Dimensional Turn to a Point of Supersonic Aircraft. Ching-Fang Lin, *The University of Wisconsin-Madison* (JGC **5**, 5, p. 512) Article

G82-088 Aerodynamic Jump Prediction for Supersonic, High Fineness Ratio, Cruciform Finned Bodies. Lawrence E. Lijewski, *U. S. Air Force Armament Laboratory, Eglin Air Force Base* (JGC **5**, 5, p. 521) Article based on AIAA Paper 81-0222

G82-089 Bifurcation Analysis of Nonlinear Aircraft Dynamics. James V. Carroll and Raman K. Mehra, *Scientific Systems, Inc.* (JGC **5**, 5, p. 529) Article

G82-090 A Vectorial Form for the Conic Variational Equations. David Hestenes, *Jet Proulsion Laboratory, California Institute of Technology* (JGC **5**, 5, p. 537) Engineering Note

G82-091 Optical Measurements and Attitude Motion of HERMES After Loss of Stabilization. F. R. Vigneron, *Department of Communications (Canada)*; and W. E. Krag, *Massachusetts Institute of Technology* (JGC **5**, 5, p. 539) Engineering Note

G82-092 Discrete-Time Stability of Continuous-Time Controller Designs for Large Space Structures. Mark J. Balas, *Rensselaer Polytechnic Institute* (JGC **5**, 5, p. 541) Engineering Note

G82-093 Single-Axis Spacecraft Attitude Maneuvers Using an Optimal Reaction Wheel Power Criterion. S. B. Skaar and L. G. Kraige, *Virginia Polytechnic Institute and State University* (JGC **5**, 5, p. 543) Engineering Note

G82-094 Stability Relationships Between Gyrostats with Free, Constant-Speed, and Speed-Controlled Rotors. Tieshou Li and Richard W. Longman, *Columbia University* (JGC **5**, 6, p. 545) Article

G82-095 Ballistic Entry Motion, Including Gravity:Constant Drag Coefficient Case. Michael E. Hough, *The Analytic Sciences Corporation* (JGC **5**, 6, p. 553) Article

G82-096 Fixed Trim Re-Entry Guidance Analysis. C. Gracey, *NASA Langley Research Center*; E. M. Cliff, F. H. Lutze and H. J. Kelley, *Virginia Polytechnic Institute and State University* (JGC **6**, 5, p. 558) Article based on AIAA Paper 81-1754 CP816

G82-097 Factors for Cubics and Quartics. Dunstan Graham, *Custom Computer Consultants* (JGC **5**, 6, p. 564) Article

G82-098 CPU Coverage Evaluation Using Automatic Fault Injection. Raymond P. Kurlak and J. Robert Chobot, *General Electric Company* (JGC **5**, 6, p. 573) Article based on AIAA Paper 81-2281 CP818

G82-099 An Analytical Pilot Rating Method for Highly Elastic Aircraft. Robert L. Swaim and Supat Poopaka, *Oklahoma State University* (JGC **5**, 6, p. 578) Article based on AIAA Paper 81-1772 CP816

G82-100 Computation of a Degree of Controllability via System Discretization. George Klein, *Columbia University*; Robert E. Lindberg Jr., *Naval Research Laboratory*; and Richard W. Longman, *Columbia University* (JGC **5**, 6, p. 583) Article

G82-101 Attitude Control of a Satellite with a Rotating Solar Array. J. P. Chretien, C. Reboulet and P. Rodrigo, *CERT/DERA (France)*; and M. Maurette, *Centre National d'Etudes Spatiales (France)* (JGC **5**, 6, p. 589) Article

G82-102 Effective Electromagnetic Shielding in Multilayer Printed Circuit Boards. K. G. Wiles and J. L. Moe, *General Dynamics* (JGC **5**, 6, p. 597) Engineering Note

G82-102 Frequency-Domain Analysis of Flexible Spacecraft Dynamics. S. C. Garg, *Ford Aerospace and Communications Corporation* (JGC **5**, 1, p. 54) Article
